

## TLR Bed Rest

Bed rest is appropriate for the client who has been confined to bed by their physician's orders or by the nature of their medical condition.

The client is moved per agency protocol to prevent the complications of bed rest. The TLR client mobility risk assessment and/or a specialized assessment would be utilized in order to determine the minimum level of assistance.

Workers always consider the risk of abusive/violent behaviour, be trained to recognize potentially violent situations, as well as how to respond to and report violent incidents.

Refer to the TLR User Manual for additional information
