

## TLR Total Lift

A total lift is used by a minimum of two workers in raising the entire weight of the client.

The total lift is appropriate for the client who at the time of the move and for the duration of the move:

- is unpredictable and/or unreliable and/or cannot weight bear; or
- is not cooperative, does not understand and/or respond appropriately to basic instructions; or
- may need to be moved in a supine position; or
- may not be able to achieve and maintain a sitting position required for a sit/stand lift; or
- prefers to be moved by a total lift

Workers always consider the risk of abusive/violent behaviour, be trained to recognize potentially violent situations, as well as how to respond to and report violent incidents.

### **ALERT**

**Ensure the client's legs remain parallel and hips neutral unless otherwise specified by a doctor's order.**

\*Alert added to TLR Safe Work Practice Jan/22

Refer to the TLR User Manual for additional information
