

# Rainbow Passage

When the sunlight strikes raindrops in the air, they act like a prism and form a rainbow.

The rainbow is a division of white light into many beautiful colours. These take the shape of a long, round arch, with its path high above, and its two ends apparently beyond the horizon.

There is, according to legend, a boiling pot of gold at one end. People look, but no one ever finds it.

When people look for something beyond reach, their friends say they're looking for the pot of gold at the end of the rainbow.
